## The Ideology of the Goal of Infinite Survival

### Preface

"Plan for Seven Generations" is an American Indian saying. Accordingly, this communication is intended for not just the current generation but, even more so, for the generations to come. Indeed, by the time these thoughts reach you (the reader), the author may have passed away long before.

I want to begin this discussion by citing the Six, Essential, Immutable Truths upon which this entire philosophical treatise is based. I will call them "Sutras" after the Hindu tradition for outlining the main points of system of thought. These Six, Essential, Immutable Truths are axioms or precepts; and they have always been, are now, and forever will remain true and unchanging - that is the claim. They are fixed, universal, necessary, and certain; and they are the only principles which are essential to this doctrine. All else is elaboration and commentary, much of which will change over time.

*Sutra 1* - **Survival** is the single, most fundamental purpose of life.

*Sutra 2* - By extension in time, the ultimate purpose of life is, necessarily, **Infinite Survival**.

*Sutra 3* - The **Individual** is the primary unit of existential meaning.

*Sutra 4* - **Scientific Empiricism** is the epistemology upon which knowledge in this system is to be grounded.

*Sutra 5* - The Individual exists concurrently in **Five Realms of Existence**: i.e., Biology, Psychology, Sociology, Ecology, and Cosmology.

*Sutra 6* - Within the frame-of-reference of Sutras 1 - 5, the Individual, who uses this Ideology, constructs a Pragmatics or **Practicum** of personal objectives, linking to relevant people, places, and thing.

Although Socrates (circa 400 B.C.E) must have been literate, he never wrote and of his many thoughts. His reason (given in Plato's dialog called "Phaedrus") is that he believed that knowledge can only be passed by the spoken word in a dialog with the interaction of others. The written word is a narrow construction of knowledge, and it freezes thought in one form - thereby imposing a barrier to the natural evolution of ideas. Although advanced civilization could not have happened without the written word; there is considerable merit to this observation of Socrates. Thus, the only fixed ideas in this text are the Six, Essential, Immutable Truths, as above, which I would ask that you memorize the key terms that are high-lighted. If you remember these 6 Sutras, you will have the back-bone of the entire system of thought; and by your own inquiry and dialog with other could invent all (and more) of the information which is discussed in the following written words.

## Background

Philosophy can be about many things; but essentially, it is about the pursuit of "Wisdom" - as the roots of the word denote (philo = a lover of + sofia = wisdom). What then is Wisdom? Essentially, Wisdom is about "Right Ideas" with Ideas being cognitive constructions of the mind and Right being determined by those Ideas which are "Accurate" (in terms of the ideas mapping to reality) and/or "Useful" (in terms of the ideas benefiting the individual or society). It probably would not come as any great surprise to suggest that many of the Ideas which we have in our minds are neither Accurate nor Useful. In other words, our minds are filled with noise; and one of the tasks of philosophy is to sort out the Right Ideas and to build personal character and social institutions accordingly. Apart from the ideas which we derive from our personal experience, we have inherited a massive amount of what is held to be Wisdom from our cultural traditions; but our reality has changed so radically from even the recent past and will continue to change even more radically in the future, such that it is doubtful that traditional Wisdom is neither Accurate or Useful for our present situation and our future potential. Given that we now know that the stars are not fires of gods in the sky but rather an almost infinite array of Suns and Galaxies expanding outward, and given that we now know that all life on Earth is a variation on the DNA molecule, and given that there are now 7 billion people on the planet clamoring for resources, and we are able to fly through the atmosphere and space, are facing massive climate change, know that our mind is an expression of neuronal networks, etc., etc., one could ask that if the great sages and prophets of the past (Moses, Jesus, Mohammed, Buddha, Lao-tsu, etc.) were alive today, would they still espouse the same doctrines as they did in their own historical setting? It is doubtful that they could or would. So, those authorities must be discounted - not discarded but discounted. And that would also apply to all of the other, lesser, historical philosophers - they would not espouse today the same doctrines which they did in their own historical time. (The one exception, it must be noted, would be Socrates, because the only philosophy which he espoused was Skepticism; and Skepticism is the root force that drives true philosophy, as it always has done and will do so, forever.)

90  
92

Why not put aside all of that traditional Wisdom, assume that everything will have to be re-evaluated, go down to generic philosophical principles, and ground our thinking there? Then, from that platform, decide where we want to be, look around at our circumstances and see where we are, devise strategies for getting from where we are to where we want to be, and move forward. In that process, we can re-evaluate the traditional knowledge and determine what continues to constitute Wisdom, keeping those elements which will work for us as we pursue our quest. However, in large measure, we will need to invent, anew, our own body of Wisdom - i.e., Right Ideas with "right" be determined by their Accuracy and Usefulness. This is the platform upon which the Ideology of the Goal of Infinite Survival was devised.

108

The highest philosophical pursuit is not just the accumulation of bits and fragments of truths or Right Ideas but rather it is the construction of an Ideology, which is an integrated system of thought that is based on an Idea or set of Ideas. There are many specialized ideologies such as Science, Democracy, Free Enterprise, etc.; and then there are comprehensive ideologies such as the religions (Christianity, Buddhism, etc.). The comprehensive ideologies represent the highest degree of abstraction or inclusiveness; and in philosophy, they are called a world-view or "Weltanschauung", which was defined by Freud in the following terms:

110 ".... By `Weltanschauung', then, I mean an intellectual construction,  
112 which gives a unified solution of all the problems of our existence in vir-  
114 tue of a comprehensive hypothesis, a construction, therefore, in which no  
116 question is left open and in which everything in which we are interested  
finds a place." Sigmund Freud (1932) Lecture XXXV A Philosophy of  
Life.

118 The Ideology of the Goal of Infinite is such a world view; and here is an outline of the  
120 formal Arguments on which this philosophy is based. This is a brief and highly compressed  
122 exposition, and a more complete discussion is given elsewhere.

124 Again, an Ideology is a system of thought that is based on an Idea or set of Ideas. Any  
126 Ideology, must defined 4 essential components: 1) the Purpose, 2) the Ontology, 3) the Episte-  
mology, and 4) the Pragmatics or Practicum. Each component is necessary and together they  
are sufficient for the construction of the Ideology as a whole.

128 **1) Purpose.** Purpose dictates process; it is the goal that determines the means; and the  
130 definition of the Purpose of an Ideology is the principle construction which governs the orien-  
132 tation of the entire philosophical system. The first thing which needs to be resolve in the  
134 design of an Ideology is its Purpose. As a rule, Answers are generated and configured by the  
136 Questions; and intelligent Answers are derived from asking important Questions. In this pur-  
138 suit, a wide variety of options are available; but the guiding principle is to discover the most  
140 fundamental truth - i.e., to discover what is the single condition upon which all other condi-  
142 tions depend? After a lengthy dialectical process, this inquiry will eventually lead to the single  
144 most essential question: what is the purpose of Life, itself? Your personal purpose cannot be  
146 different from the purpose of Life, itself; because you are just a variation on that common  
148 theme. In answering this question, one will be compelled by logic, reason, empirical evidence,  
150 and common sense to conclude that the single, most fundamental purpose of life is "Survival"  
152 - survival is the *conditio sine qua non*. Given Survival, all things are possible; without Survival  
154 nothing matters. Further, by extension in time, Survival would have to be the single, most fun-  
156 damental purpose of Life in the near and more distant futures; and the ultimate purpose would  
158 have to be Infinite Survival - that is the "teleology" or ultimate expression of this most funda-  
160 mental condition. In principle, this is exactly the same as what the traditional religions have  
162 resolved - they are particular approaches to Salvation or Infinite Survival. Although the ulti-  
mate purpose is the same, the religions have been constructed on the assumption that there are  
two realms of existence - 1) the material realm, which is transient and limited and entails suf-  
fering and ultimate death, and 2) the spiritual realm, which is permanent, unlimited, and  
blissful and eternal, with the spiritual realm being the actual cause of the material world; and,  
after death in the material realm, the individual can migrate into the spiritual realm and live  
forever. The ultimate Purpose of the different religious doctrines is to get the believer from the  
impermanent, material realm into the permanent, spiritual realm. Obviously, the merit and effi-  
cacy of the religions depends entirely on the existence of such a non-material, spiritual realm.  
As you will see by the Epistemology for this Ideology, we will not have much to say about the  
religious approach to Infinite Survival because their claims are not subject to validation by the  
Epistemology of this system - i.e., Scientific Empiricism. Besides, given that there are 21

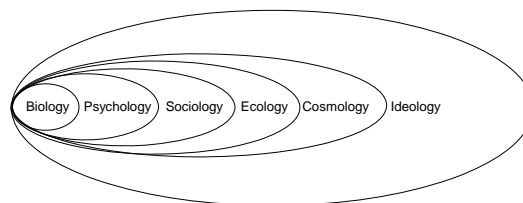

164 major religions in the world among a total of some 4,000+, the existing religions do not need  
166 any improvement and are more than adequate to resolve the dualistic vision of existence. Their  
168 validity depends on belief, while Empiricism depends on objective proof. Keep in mind that  
Infinite Survival, as used here, is not a static condition. It is not a place or a thing but rather an  
unending pursuit that is consistent with the intrinsic nature of each individual being.

170 **2) Ontology.** The next essential element in an Ideology is its Ontology, which, as used  
172 here, is concerned with the Being or point-of-reference in which the Ideology has its meaning  
174 and application. In this system, the particular Individual, who uses the Ideology, is the central  
176 reference. Things count if they pertain to and benefit the Individual, and, while there are  
178 objective and universal criteria for determining what should be relevant and beneficial to all  
people, it is, ultimately, the Individual who determines that for oneself. At first, this may  
appear to be solipsistic and anti-social; but that is countered by understanding the functionality  
of cooperation and reciprocity with other people in accordance with one's Purpose.

180 **3) Epistemology.** Epistemology is how we determine the validity of our knowledge and  
182 establish Right Ideas; and in this system, it is Scientific Empiricism, which means that in pur-  
184 suit of the goal of Infinite Survival, we build our knowledge on material facts that are scientifi-  
cally valid and that are empirically relevant to our pursuit.

186 **4) Practicum.** The Practicum or Pragmatics of the Ideology is the assemblage of practi-  
188 cal applications which serve the Individual as validated by the Epistemology in pursuit of the  
190 Purpose. Each Individual exists as a unique entity, in unique circumstances; and therefore,  
192 each person's Practicum will be different. However, we all have many things in common, one  
194 of which is over-coming disease and death - i.e., Life-Extension Science and Technology. And  
that enterprise is, a fortiori, the main objective of the Foundation for Infinite Survival because  
it is relevant to everyone's survival.

196 Another important concept is to see that each person exists in Five Realms, which are  
198 inter-related and inter-dependent. They are the following: Biology, Psychology, Sociology,  
200 Ecology, and Cosmology. Think of your personal existence as concentric spheres, expanding  
outward from your physical being, as below.

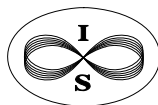

210 Most fundamentally, you exist in the World as a physical, biological being. Through your  
212 mind or Psychology, you interact with and navigate through the world, the first order of which  
214 would be the societies of other humans or Sociology. Then, you and society exist within and  
depend on the Earth's Ecology, and finally the existence of the entire world depends on many  
aspects of the extra-planetary realm, Cosmology. Adaptive strategies in each realm need to be

218 devised within the frame-work of the Ideology. Biologically, the main objective is Life-  
 220 Extension Science & Technology. Psychologically, one of the objectives is to create an  
 222 identity and personal character which is effective in the pursuit of the Goal; and the Aphorism  
 224 or Mantra of the Ideology, which follows, will help do that. In the realm of Sociology, some of  
 226 the issues are: family, career, building communities, and making connections with the social  
 228 networks that are relevant to the goal and to your pursuit of it. In the realm of Ecology, think  
 about positioning yourself in a sustainable environment with access to resources, something  
 which will become increasingly important and a challenge as we navigate through the prob-  
 able collapse of vulnerable eco-systems and societies. And many adventures await us in the  
 realm of Cosmology with off-planetary exploration and development.

230 The following is an aphorism or mantra, which compresses the Ideology into one state-  
 232 ment. In the left-hand column are the components of the statement or affirmation, and the  
 explanation of the function of each segment is provided in the right column.

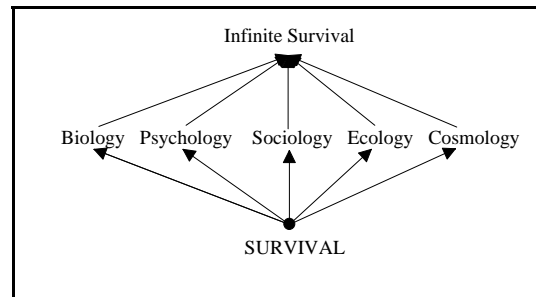

Aphorism or Mantra of the Ideology	Elements of Philosophical Construction
<p>236</p> <p>238 <b>"I am the goal of Infinite Survival,</b></p> <p>240</p>	<p>This defines the (1) <u>Goal</u> of the Ideology and establishes (2) the <u>Ontology</u>, affirming that goal as one's personal identity.</p>
<p>242</p> <p>244 <b>applying myself through ( <u>your name</u> ),</b></p>	<p>This embeds that identity within one's <u>Persona</u> (3).</p>
<p>246</p> <p>248 <b>according the principles of Scientific Empiricism -</b></p>	<p>This establishes the <u>Epistemology</u> (4) or how truths are defined for the system.</p>
<p>250 <b>linking to relevant aspects of people, places,</b></p> <p>252 <b>and things in all realms of existence - biol-</b></p> <p>254 <b>ogy, psychology, sociology, ecology, and</b></p> <p>256 <b>cosmology."</b></p> <p>258</p>	<p>This embeds the Goal, Ontology, Persona, and Epistemology, <i>supra</i>, into the <u>Five Realms of Existence</u> (5) and is the framework for establishing the <u>Pragmatics</u> (6) of the Ideology - i.e., a personal and social Practicum for the application of the Ideology.</p>

262 This is the Symbol, Logo, or Mandala for the Ideology.

"IS" represents the idea of Infinite Survival as the goal; the 6 concentric infinity signs represent the Ideology, itself, in the 5 realms of existence; and the circle represents the system of thought, as a whole.

Another graphic representation is the schematic below.

Here, the fundamental principle of life, Survival, is expressed in the 5 Realms of Existence with the ultimate goal or pursuit being Infinite Survival.

### Closing Remarks

It is said that Civilization is constructed by two elements: 1) a Great Analysis and 2) a Great Story. And the two elements upon which Western civilization is structured are represented by culture of Athens (i.e., Reason, as the Great Analysis), and Jerusalem (i.e., Christianity, as the Great Story). Here, the Great Analysis is the Goal of Infinite Survival as defined in the preceding discussion and the Great Story is you and the life which you conduct in pursuit of that Goal. You are the hero of your own Story.

The discussion about philosophy may seem too abstract and unnecessary; however, I feel quite certain that thinking about philosophy will become one of your most important assets as we move into a rapidly evolving future, and it will be necessary for you to take advantage of the changes. The history of the last century has been driven by progress in the scientific understanding of nature (mostly physics) and by the technological inventions which that science has enabled. Now, as we move into the scientific understanding of biology, the technologies which emerge therefrom will radically change the entire paradigm of human existence. And Life-Extension Science, more than any technology, will force everyone adapt to long-range survival, whether or not they are actively engaged and desirous and willing. Of course taking advantage of the opportunities is enhanced by active engagement. Keep in mind, that this technology also entails expanded challenges and responsibilities. Your philosophy is the substrate of your consciousness, which frames both your conscious and unconscious minds; and in so doing, it filters and focuses your inter-action with the world about you. What and how you think determines how you act. And the way you act, modifies your circumstances which in turn feeds back in a dynamic oscillation that eventually shapes your destiny. We tend to make happen our expectations.

326 This constitutes a summary of the main principles of the entire philosophy or Ideology.  
328 To understand more fully will take a fair amount of consideration and discussion. In the pur-  
330 suit of Life-Extension Science, the meaning and purpose of the philosophy will become  
332 clearer. See that discussion.
